IDEX Fire & Safety- Disrupting a traditional industry

Supporting the effort in making first responders safer!

AT A GLANCE

IDEX Fire and Safety is focused on first responders globally. Their portfolio of products and brands have been saving lives for over a hundred years. IDEX is set to disrupt the legacy fire and rescue markets through technology and automation. Making the fire scene safer and getting water faster to the fire.

CHALLENGES

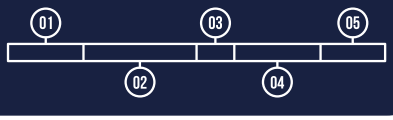
- Legacy code and architecture, multiple starts and stops
- Limited resources to focus on development and maintenance
- Attrition of the development team and leadership
- Bringing technology and IoT to a heavy analog world

THE MAVEN WHY

IDEX is disrupting the legacy operations and products to make the fire scene more efficient and safer for first responders. Through data capture, IoT to historically analog devices, automation and cloud-based analytics. MAVEN is the perfect partner to create a plan of attack and a sustainable development model to future proof IDEX Fire & Safety's technology roadmap. MAVEN is honored to support IDEX's mission of helping to save lives and keep our first responders safe!

Create a path

MAVEN is helping to create a path of technology development in a legacy analog, niche market.



KEY COMPONENTS

1 Resource Interviews--the organization today

The MAVEN team went through a detailed interview process to understand IDEX's technology and team. MAVEN created a plan to implement technology at a faster pace, while maintaining existing technology with a limited internal development team at IDEX.

2 Understanding the past

The MAVEN team assessed the existing code and architecture and developed a plan to tighten and build. Implementing new IoT devices and cloud-based analytics while maintaining the global data regulations.

3 Development support

Working with IDEX's development teams, MAVEN is supporting the build process and training. Helping to future proof IDEX's technology evolution as they continue to disrupt the market, bringing IoT to historically mechanical devices, advanced data analytics and product automations.
