

# Streamlining services through intuitive web based applications

Delivering custom-built solutions to solve inefficiencies for aerospace client, on time and under budget.

## At a glance

Our client came to us with a challenging request of continuing the development of a legacy system and create an entire back-office system, streamlining their business with one complete solution.

## CHALLENGES

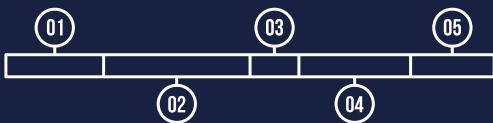

Create an entire back-office system and customer portal that would streamline the client's business with one complete solution.

## THE MAVEN WHY

Our goal was to deliver a customized solution for a client facing challenges with an urgent timeline.

## Key metric

*The projected 4-year project timeline was accomplished successfully by Maven in 6 months.*

Customized Solution

Web and Application Development

Project Management

## KEY COMPONENTS

1

### Internal personal web application

Maven developed a complete internal PWA (personal web application) for on-site technicians to complete their scheduled certifications for Aerospace manufacturing equipment.

2

### Portal System

Maven created a portal system—allowing the client's customers to interact directly with technicians, receive notifications, manage schedules, and access mission critical certification data.
